

Press Release
November 12, 2010
For Immediate Release

PAC Member Firm, Geckotech, is Acquired by M5 Networks for \$8M, Forming the Largest Hosted VoIP Company in the U.S.

Chicago, IL- The Chicago-based leader in hosted VoIP systems, Geckotech, announced last week that they had been acquired by M5 Networks, a New York-based communication firm. The combination of staff, customers and data centers will create the largest specialized hosted VoIP company in the United States.

The companies have joined forces to better service the exploding demand for business-grade hosted communications. While Geckotech, www.geckotechllc.com, provides a Cisco-powered Hosted VoIP platform, M5, www.m5net.com, offers their unique Call Conductor technology.

Geckotech's CEO, Josh Robbins and M5's President and CEO, Dan Hoffman, feel that the acquisition will enable their customers to use a more advanced phone system technology to become more efficient and better informed organizations.

Mr. Robbins will join M5 Networks as Vice President of Business Development and remain at the Chicago Geckotech office.

According to PAC Founder Nick Arvis, "Josh has been a part of our organization since 2006. During that time. I have watched him rapidly grow his sales while continuously improving his operations. We, at PAC, couldn't be more proud of what he did with Geckotech. We look forward to staying in touch with Josh in the years ahead."

In August, Mr. Robbins said this about PAC, "Make sure you get good advice if you need to implement a change...For me, that meant starting with PAC."
